

Business Internet T1

CyberLynk, a Midwest leader in the Business Internet Service industry maintains a high-speed wired network to provide service to business customers. Our experience of providing high quality connections to businesses throughout the Chicago and Milwaukee markets, has enabled us to develop an innovational business T1 product specifically geared for typical business needs.

How is a CyberLynk T1 different?

Reason 1: CyberLynk Pricing

Based on CyberLynk's many years of experience of providing Internet T1 connections to businesses, we understand the typical business needs. Most businesses need to have bursts of speed available for large downloads and file transfers. At the same time, most businesses use only a small portion of their T1 connection for the majority of the day.

CyberLynk understands this business usage pattern and we price our T1 service accordingly. Most ISP's will charge your company a flat rate for T1 service regardless of your actual or expected usage. CyberLynk will analyze your expected T1 usage and price it accordingly. This means that your company will have FULL T1 access while paying Fractional T1 pricing.

Reason2: CyberLynk POP's

CyberLynk has more Local Points of Presence (POP's) than other ISP's. Having a CyberLynk POP closer to your business will mean that your actual telephone company costs will be reduced significantly

Reason 3: The CyberLynk Package

CyberLynk knows that most businesses have several of the same service needs in addition to the T1 connection. Therefore CyberLynk **INCLUDES** these services **AT NO EXTRA COST!** Most businesses today have a need for:

- website hosting
- the ability to use and administer an unlimited number of e-mail boxes
- connectivity for employees from home or on the road.

Some businesses have additional needs such as multiple IP live addresses and VPN capabilities. Therefore, CyberLynk includes all of the following as part of our T1 connectivity:

Included Business Internet Services

- Virtual Server with 100mb of storage for your web site.
- Customer maintained E-mail server with unlimited mail and unlimited mailboxes.
- Two V.90, 56K dial-up accounts for use anywhere in the CyberLynk service area.
- Toll-free* dial-up access for use while on the road.
- Additional IP addresses as needed.

All that is needed is a short needs analysis appointment with a CyberLynk Account Executive to determine eligibility.

There are 3 possible classifications that your business will fit into based on expected usage. Pricing for each classification is as follows:

CyberLynk Business Internet FULL T1 Rates					
Term->	Monthly Rates *			Install*	Normal Usage
	1 Year	2 Year	3 Year		
Standard Business	\$500	\$450	\$400	\$ 1,300	Most corporate/business customers
